

Pizza Sales Analysis : Insights Through SQL

This project dives into pizza sales data, leveraging SQL to tackle a range of queries from basic to complex, uncovering key trends and actionable insights.

Data Description

The pizza sales analysis project utilizes four distinct datasets, each providing crucial information about different aspects of the restaurant's operations. These datasets collectively offer a comprehensive view of sales performance, customer preferences, and operational efficiency.

Datasets:

1. Pizzas Dataset:

- **Description:** Contains details about the various pizzas offered.
- **Key Features:**
 - pizza_id:** Unique identifier for each pizza.
 - pizza_type_id:** Identifier linking the pizza to its type.
 - size:** Size of the pizza (e.g., Small, Medium, Large).
 - price:** Price of the pizza.

Data Description

2. Pizza Types Dataset:

- **Description:** Includes detailed information about the types of pizzas.
- **Key Features:**

pizza_type_id: Unique identifier for each pizza type.

name: Name of the pizza type.

category: Category of the pizza (e.g., Vegetarian, Non-Vegetarian).

ingredients: Ingredients used in the pizza.

Data Description

3. Orders Dataset:

- **Description:** Contains information about each pizza order.
- **Key Features:**

order_id: Unique identifier for each order.

date: Date when the order was placed.

time: Time when the order was placed.

Data Description

4. Order Details Dataset:

- **Description:** Provides specific details about each item in an order.
- **Key Features:**

order_details_id: Unique identifier for each order detail.

order_id: Identifier linking the order to the order details.

pizza_id: Identifier linking the order detail to the pizza.

quantity: Number of pizzas ordered.

Retrieve the total number of orders placed.
